Name: **Lance Timothy Satorre**

Github Link: https://github.com/Lancesatorre/IntProgActivities/tree/main/Lab3-Activity_SATORRE

Objective

The objective of this activity is to build a simple web application using Node.js and Express.js. The application allows users to submit items through a form and display them using server-side routing.

Tools Used

- Node.js
- Express.js
- Visual Studie Code
- Web Browser

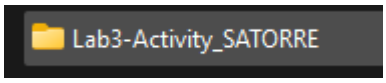
Step-by-Step Procedure

1. I downloaded Node.js from the official website and installed the LTS version. After installation, I verified it using:

```
C:\Users\Admin\OneDrive\Desktop\IntProgActivities\Lab3-Activity_SATORRE>node --version
v22.18.0

C:\Users\Admin\OneDrive\Desktop\IntProgActivities\Lab3-Activity_SATORRE>npm --version
10.9.3
```

2. I created a new folder named:



3. Inside the terminal, I ran:

   npm init -y

4. I installed Express by running:

   npm install express

5. I created a file named index.js:

```
const express = require('express');
const app = express();
const port = 3000;

app.use(express.urlencoded({ extended: true }));

app.use(express.static('public'));

app.use((req, res, next) => {
    console.log(`${req.method} request made to ${req.url}`);
    next();
});

let items = [];

app.get('/items', (req, res) => {
    res.json(items);
});

app.post('/add-item', (req, res) => {
    const newItem = req.body.item;
    if (newItem) {
        items.push(newItem);
    }
    res.redirect('/index.html');
});

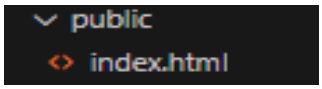
app.get('/about', (req, res) => {
    res.send("This is the About Page");
});

app.use((err, req, res, next) => {
    console.error(err.stack);
    res.status(500).send('Something broke!');
});

app.get('/', (req, res) => {
    res.sendFile(__dirname + '/public/index.html');
});

app.listen(port, () => {
    console.log(`Server running at http://localhost:${port}`);
});
```

6. I created a folder named public and inside of it, I created index.html:

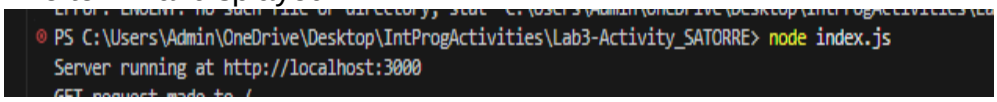


7. In index.js, I added this:

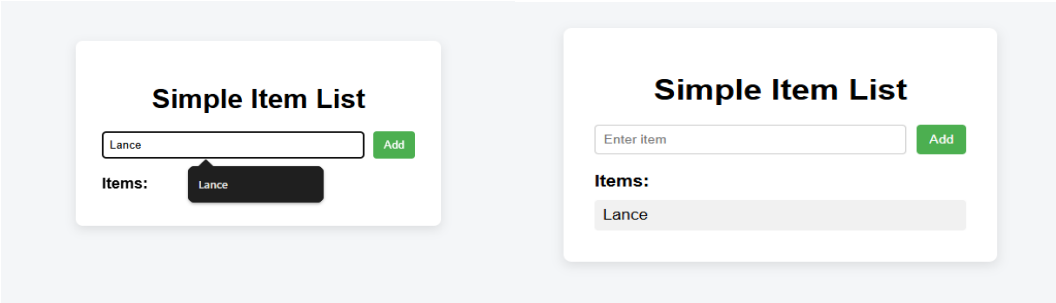
```
app.use(express.static('public'));
```

- This allows the browser to access files inside the public folder.

8. I started the server by running:
   The command is >> **node index.js**
   The terminal displayed:



9. Lastly, I tested the program by adding a item and display the Added item/s.



Conclusion

This activity helped me understand how backend development works using Node.js and Express.js. I learned how a server handles requests, processes data, and responds to clients. This activity strengthened my understanding of routing, middleware, and form handling in web development.
